

Albert Einstein

The Boy Who Kept Wondering

The true story of a boy who wondered what moved a compass needle, kept imagining even when nobody said yes, and grew up to change how we understand light, space and time.

Before reading

Look at the cover. What is little Albert holding? What do you think it does?

While reading

1. Why did the compass needle surprise Albert?
2. Albert didn't like just repeating facts at school. Why did he want to know *why*?
3. Nobody said yes to Albert's letters. How do you think he felt? What did he do next?

After reading

1. Albert imagined riding next to a beam of light. Where would you travel in your imagination?
2. How did the eclipse in 1919 help check Albert's idea?
3. What makes *you* wonder?

The big idea

Wonder. Imagine. Check!

Use it as a three-step habit: wonder about something, imagine an answer, then check it together.

Try this together

A wonder walk. On a walk, take turns pointing out one thing you each wonder about. At home, imagine an answer, then check it in a book or with a simple test.

Words to talk about

compass · magnet · wonder · imagine · energy · eclipse

Tips for reading aloud: pause on the pictures and let children notice details first. There are no wrong answers to these questions; follow your child's curiosity. The back of the book has four simple experiments to try, and a free activity pack is at tarkasatales.com/activities.
