The Questions in Everyday Things

Inside this pack

1. Words to know — a picture-book glossary
2. Be a curious scientist — four things to try with a grown-up
3. My big question — write and draw your own question

These pages come from the back of the book. Print them at home or in class and enjoy them together.

Words to Know

Gravity: the pull that makes things fall to the ground.

Prism: a clear, shaped glass that splits light into colours.

Sundial: a clock that uses a shadow to tell the time.

Orbit: the path of something going round and round another thing.

Telescope: a tool that makes faraway things look closer.

Experiment: a test to find out if an idea is true.

Motion: moving.

Comet: a ball of ice and dust with a glowing tail.

Be a curious scientist

Try these with a grown-up:

1. Drop test. Drop a ball and a scrunched-up piece of paper at the same time. Which lands first? Now drop a flat sheet. What changed?

2. Make a rainbow. Put a glass of water in sunshine on a sheet of white paper. Can you find the colours?

3. Shadow clock. Put a stick in the ground. Mark the end of its shadow every hour. What happens?

4. Roll it. Roll a toy car down a ramp onto a smooth floor, then onto a rug. Where does it go further?

My big question

My name is _____

I looked at _____

I asked _____

I tested it by _____

Draw your test:
